The CONELOG® Implant System

The CONELOG® Implant System is based on years of clinical and laboratory experience and is a user-friendly, consistent prosthetically oriented implant system.

All CONELOG® Products are manufactured with the latest state-of-the-art technology. The CONELOG® Implant System is continuously being developed by the company's research and development team in collaboration with clinics, universities and dental technicians and therefore stays abreast of the latest technology.

The CAMLOG® and CONELOG® Implant Systems are very well documented scientifically. Studies* support this with respect to a great many parameters including the implant surface, time of implantation and/or implant loading, primary stability, and the connection design. The long-term results of the Promote® Surface are convincing.

The descriptions that follow are not adequate to permit immediate use of the CONELOG® Implant System.

Instruction by a surgeon experienced in using the system is strongly recommended. CONELOG® Products should only be used by dentists, doctors, surgeons and dental technicians who have been trained in using the system. Appropriate courses and training sessions are regularly offered by Camlog.

Methodological errors in treatment can result in loss of the implant and significant loss of peri-implant bone.

Not all products and services from Camlog are available in all countries.

Packaging units: unless described otherwise, each pack contains one product.

The images in this document are for reference purposes only and may differ from the actual product.

* See «Further documentation» on page 122

CONELOG® PROGRESSIVE-LINE Implants

The new CONELOG® PROGRESSIVE-LINE Implants make it easier to implement modern treatment concepts such as immediate restorations or immediate loading, which require high primary stability [1, 2]*.

The geometry of the implant is consistently designed to develop high initial stability:

- The self-tapping screw implant has a conically shaped apical area that enables pronounced primary stability even in soft bone [1, 2]*.
- Thread extending to the apex for good anchorage in immediate implantations [1, 2]*.
- Crestal thread for improved hold with limited bone height [2]*.

CONELOG® PROGRESSIVE-LINE Implants are available with the abrasive-blasted, acid-etched Promote® Surface which extends over the entire implant body up to the acid-etched conical 45° implant shoulder. Depending on the clinical situation, this surface design thus permits epicrestal or slightly subcrestal implant positioning in the sense of a classic bone level implant.

PROGRESSIVE-LINE Implants with screw-mounted insertion post can be used for the guided implantation.

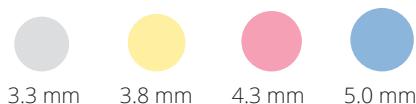

CONELOG® PROGRESSIVE-LINE Implants feature the high-precision, conical CONELOG® Implant-abutment connection with integrated Platform Switching. Prosthetic restoration is performed with CONELOG® Abutments.

CONELOG® PROGRESSIVE-LINE

CONELOG® SCREW-LINE
Implant Promote® plus

CONELOG® SCREW-LINE Implants

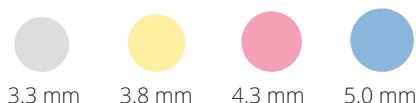

CONELOG® SCREW-LINE Implants are slightly conical, self-tapping screw implants. They enable easy insertion by self-centering with continuous bone contact to achieve solid primary stability.

CONELOG® Implants are available with the abrasive-blasted, acid-etched Promote® surface up to the acid-etched conical 45° implant shoulder and thus allow for maximum flexibility when determining the vertical implant position. Rounding of the apical geometry ensures gentle insertion of the CONELOG® SCREW-LINE Implants into the bone, also near the maxillary sinus.

SCREW-LINE Implants with screw-mounted insertion post can be used for the guided implantation.

CONELOG® SCREW-LINE Implants feature the high-precision, conical CONELOG® Implant-abutment connection with integrated Platform Switching. Prosthetic restoration is performed with CONELOG® Abutments.

Implant diameters

Implant lengths

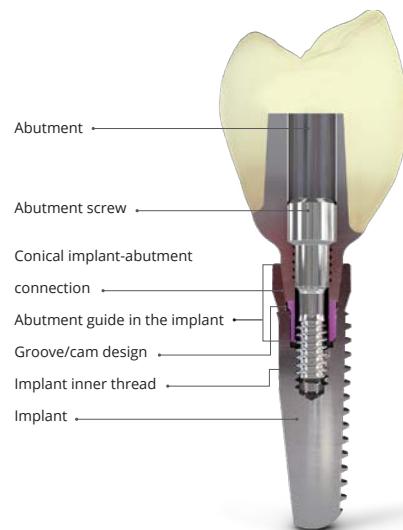

All CONELOG® Implants are delivered pre-assembled in sterile packaging on a color-coded insertion post corresponding to the diameter.

CONELOG® Implant-Abutment connection

The geometry of the CONELOG® Implant-Abutment connection enables integrated Platform Switching and provides excellent tactile feedback when inserting the abutments. Indexing via the three grooves/cams allows the cams to slide noticeably into the grooves of the implant and thus into the final position when the abutment is rotated slightly. Simple, easy and safe orientation in the longitudinal axis of the implant is thus ensured. The precise conical connection minimizes micro-movements and demonstrates superior stability compared to other conical connections [3, 4]*.

* See „Further documentation“ on page 122

Advantages and benefits of the CONELOG® Connection

- Simple, fast and precise abutment positioning with clearly noticeable tactile feedback
- Precise, conical implant-abutment connection with superior stability compared to other conical connections
- Integrated Platform Switching

For optimal positioning of the abutments, the implant should be aligned in the bone so that one of the three grooves points in vestibular direction. With the CONELOG® Implants, the insertion tools include markings that correspond to the three grooves of the implant inner configuration.

Promote® Surface

CONELOG® Implants are available with the abrasive-blasted, acid-etched Promote® Surface. The surface is based on current scientific knowledge and supports rapid osseointegration. Scientific results from studies with cell cultures, osteohistology and in pull-out trials illustrate this impressively.

Production precision

The inner and outer geometry of the CONELOG® Implants and abutments are rotary machined for the most part. The tolerances can therefore be kept very low. The result is excellent part precision without impacting the material structure. The CONELOG® Implant-abutment connection thus ensures a very precise, stable and rotation-locked connection to the prosthetic components.

CONELOG® Prosthetic components

The CONELOG® SCREW-LINE Implants can be provided with a wide range of flexible, anatomically adapted prosthetic components. CONELOG® Abutments are color-coded according to the implant diameters.

Effect of the Platform Switching design

The CONELOG® Implant system offers integrated Platform Switching as the implant shoulder is not covered by the healing caps and abutments. Platform Switching option is used to support the hard and soft tissue in the peri-implant esthetic region. The distance between the implant-abutment interface and the alveolar crest is increased and thereby reduces the effect of inflammatory cell infiltration with concomitant bone resorption.

CONELOG® Healing caps

CONELOG® Healing caps sit on the machined implant shoulder, but do not cover it completely. As a result, the soft tissue over the shoulder can be adapted. The conical surfaces do not come into contact.

The healing caps are used according to indication for single and two-stage procedures. The healing caps are available in three geometries (cylindrical, wide body and bottleneck) and are screwed directly into the implant.

CONELOG® Impression taking

Impression-taking of the CONELOG® Implants is possible with impression posts, open or closed tray. All impression-taking components are color-coded based on the implant diameter. High-precision components ensure correct transfer of the intraoral situation.

The CONELOG® Impression posts do not lock into the cone of the implant, but lie on the implant shoulder. Thus, a vertical offset is prevented when taking the impression. The antirotational mechanism is ensured by the CONELOG® Groove/cam geometry.

CONELOG® Temporary abutments

CONELOG® Temporary abutments made of titanium alloy are available for temporary restorations in crown and bridge versions. The abutments can be used in immediate implantations or after exposing the gingiva.

CONELOG® Titanium bases CAD/CAM

CONELOG® Titanium bases CAD/CAM are acting as a bonding basis for customized, implant-supported dental restorations made of suitable materials. Reconstructions are fabricated with the aid of CAD/CAM techniques. CONELOG® Titanium bases CAD/CAM are available in crown and bridge versions in the gingival heights 0.8 and 2.0 mm.

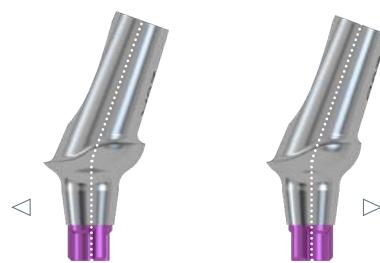

CONELOG® Esthomic® Abutments

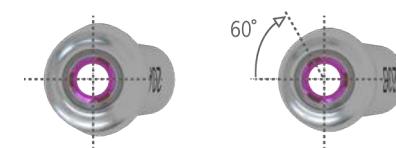

Anatomically preformed abutments allow for optimal stump design. The CONELOG® Esthomic® Abutments are available both straight and angled with various gingival heights and with an oval anatomically pre-shaped shoulder profile. The angled Esthomic® Abutments are available in A and B versions differentiated by a cam offset of 60°. This results in six prosthetic-oriented rotating positions and allows perfect prosthetic alignment of the axes.

CONELOG® Esthomic® Abutment cam alignment

Type A
Cam alignment
against the angle

Type B
Cams with 60° offset

CONELOG® Gold-plastic abutment

The CONELOG® Gold-plastic abutment can be used with the cast-on technique to fabricate a multitude of customized implant restorations, such as single crowns, mesostructures for cementable bridge restorations and primary abutments for bridging implant axis divergences in the double crown technique.

CONELOG® Logfit® Abutments

The CONELOG® Logfit® Prosthetic System can be used for fabricating cementable crown and bridge restorations. The Logfit® Prosthetic System consists of prefabricated components precisely matched to one another and thus standardizes the clinical and technical procedure. The result is a lower workload for the practice and the dental laboratory.

CONELOG® Universal and telescope abutment

CONELOG® Universal and telescope abutments can be used for individually fabricated cementable crown and bridge restorations and for double crown restorations. The abutments are made of titanium alloy and can be custom trimmed.

CONELOG® Ball, Locator® and straight bar abutments

Ball, Locator® and straight bar abutments are available for the CONELOG® Implant System. These differ from the abutments in the apical region through different connection designs. Ball, Locator® and straight bar abutments are manufactured as single pieces with a thread in the apical region which engages with the inner thread of the CONELOG® Implant. These abutments are screwed into the CONELOG® Implant using the corresponding insertion tools.

Example: CONELOG® Ball abutment (\varnothing 4.3 m)
in a CONELOG® SCREW-LINE Implant

CONELOG® Disconnector for CONELOG® Abutments

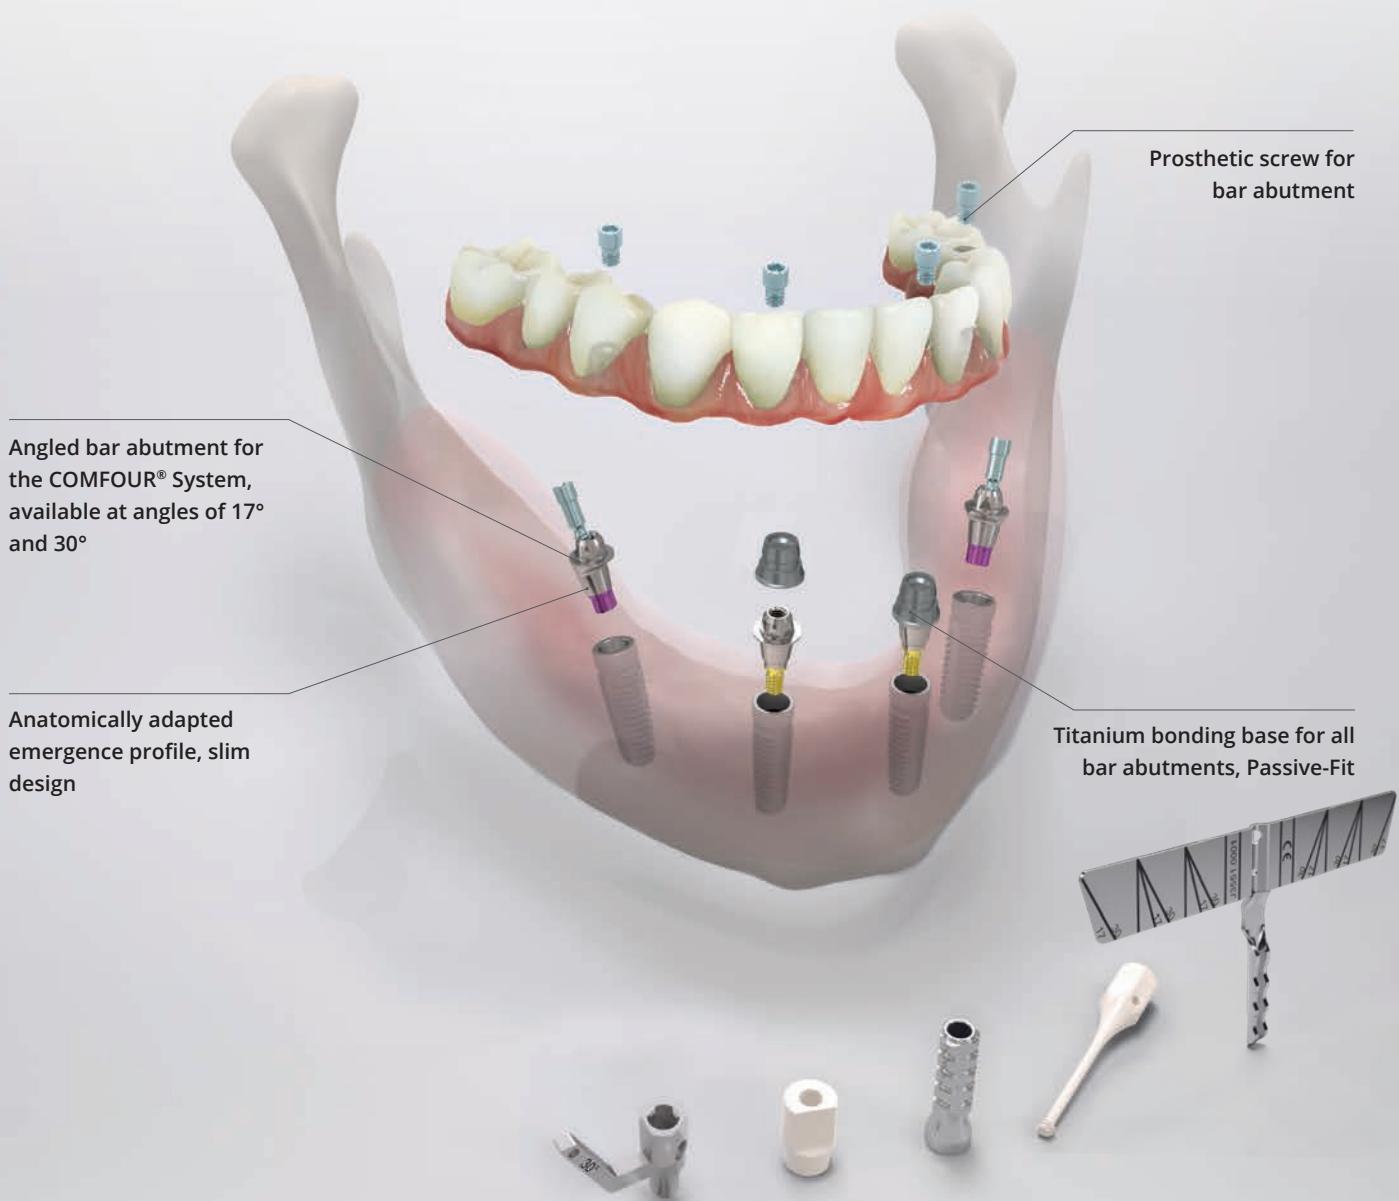

A special CONELOG® Disconnector is available for the easy removal of CONELOG® Abutments from CONELOG® Implants or lab analogs. First the CONELOG® Abutment screw/ or lab screw is removed and the disconnector is screwed into the screw canal until the abutment releases from the internal cone of the CONELOG® Implant or lab implant.

COMFOUR® System

Occlusally screw-retained restorations are state-of-the-art. With the COMFOUR® System, edentulous patients are given the option of immediate, comfortable and permanent dentures on four or six implants as a rule – and thus a considerable gain in quality of life. But clinicians too can look forward to considerably greater comfort and freedom. COMFOUR® offers several treatment concepts. In addition to occlusally screw-retained crowns and bridges for immediate and delayed restorations, the multi-optional system also permits bar restorations on straight and angled bar abutments.

COMFOUR® offers a wide range of options to master the challenges in practice routine easier and with less time in future. Next to its versatility, the COMFOUR® Prosthetic system excels through its slim design in particular. All components are of delicate and low design, which simplifies prosthetic restorations considerably for dentists and dental technicians. In addition, a number of technical highlights ensure that COMFOUR® is not simply just a name, but also a program – for users and patients alike.

COMFOUR® offers a large selection of options to manage the requirements of your practice. Easier and more time-saving.

Digital service

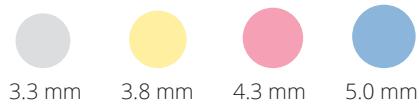

Individually CAD/CAM fabricated prosthetics, scanning and design services, 3D implant planning, printed drilling templates and jaw models are available from Camlog through our DEDICAM® Service Division. Personal support with the accustomed competence of our employees as well as processes optimized right down to the finest detail ensure a high degree of certainty of results with the greatest possible individual freedom. Extensive libraries for the open CAD systems from 3Shape, exocad and Dental Wings are available for implant-supported restorations. Discover your options and start your digital future with DEDICAM®.

DEDICAM® Services are not available in all countries. Please ask your local Camlog representative for details.

Accessories for CAM titanium blanks, type IAC

	Article	Art. No.	\varnothing
	CONELOG® Collet for CAM blank, type IAC* Ø 6 mm, length 17 mm, incl. 2 fixing screws for CAM blank, type IAC	C3720.3300	3.3 mm
	Material Stainless steel	C3720.4300	3.8 mm
			4.3 mm
		C3720.5000	5.0 mm

Type IAC*

For the milling process, the CAM titanium blank type IAC is fixated to the implant-abutment connection via the CONELOG® Collet for CAM blanks. The machine-specific holders and adapters for the collet as well as the milling strategies are to be provided by the user.

Type ME**

For the milling process, the CAM titanium blank type ME is fixated with the front-facing groove of its cylindrical section via a milling holder for PreFace® Abutments from Medentika®. These milling holders are available for selected machines from the particular machine manufacturer.

The CAM titanium blanks require product specific CAM libraries which are available on request for selected CAM softwares from the software provider.

The geometries of the CONELOG® CAM Titanium Blanks are available as a CAD library for leading dental CAD systems. The libraries are available for free download at:

www.camlog.com/en/media-center/cad-libraries.

Medentika® and Preface® are registered trademarks of Medentika GmbH, D-Hügelsheim.

Overview Tightening torque

Article	Instrument	Tightening torque
 Implant cover screw		
 Healing caps cylindrical, wide body, bottleneck		
 Impression posts Bite registration post		tightened by hand**
 Lab screws  Lab screws with reduced head		
 Temporary abutments titanium, crown and bridge	 J5317.0510	
 Abutment screws  Abutment screws with reduced head	 J5317.0501	
   Esthomic® Abutment, straight Esthomic® Abutment, angled 15°/20° Esthomic® Abutment, Inset	 J5317.0502	
   Universal abutment Telescope abutment Gold-plastic abutment	 J5317.0504	20 Ncm*
  Logfit® Abutments Titanium bases CAD/CAM, crown and bridge	 J5317.0503	
 CONELOG® CAM titanium blank, type IAC and ME		

* with the torque wrench J5320.1030

** Optional for temporary abutments titanium: torque after completed healing phase 20 Ncm.
All screws must be retightened with the corresponding torque after at least 5 minutes!

Article	Instrument				Tightening torque
	3.3 mm	3.8 mm	4.3 mm	Ø 5.0 mm	
Bar abutment, straight					20 Ncm* 30 Ncm*
J5300.0020 J5300.0021 J5300.0025					
Bar abutment, 17° and 30° angled					20 Ncm*
					tightened by hand

Locator® Fixture for bar abutment					20 Ncm*
					
Scanbodies					
					
ScanPosts for Sirona® Scanbody	J5317.0501	J5317.0502			tightened by hand

* with the torque wrench J5320.1030

All screws must be retightened with the corresponding torque after at least 5 minutes!

Materials

Titanium Grade 4		
Properties (ASTM F67)		
Chemical structure (in %)	O	≤ 0.4
	Fe	≤ 0.5
	C	≤ 0.08
	N	≤ 0.05
	H	≤ 0.015
	Ti	Rest
Mechanical properties	Tensile strength	≥ 550 MPa
	Elongation at break	≥ 12 %

Titanium alloy Ti6Al4V ELI		
Properties (ASTM F136)		
Chemical structure (in %)	Al	5.5 – 6.5
	V	3.5 – 4.5
	Fe	≤ 0.25
	C	≤ 0.08
	N	≤ 0.05
	O	≤ 0.13
Mechanical properties	H	≤ 0.012
	Ti	Rest
Mechanical properties	Tensile strength	≥ 860 MPa
	Elongation at break	≥ 10 %

Cast-on gold alloy CONELOG® Gold-plastic abutment		
Properties		
Chemical structure (in %)	Au	60
	Pd	20
	Pt	19
	Ir	1
Physical properties	Melting range	1400 – 1490 °C
	Density	17.5 g/cm³
	E-Modul	136 GPa
	Coefficient of thermal expansion (25 – 500°C)	11.9 µm/m· °C
	Coefficient of thermal expansion (25 – 600°C)	12.2 µm/m· °C
	Color	white
Mechanical properties		drawn
	Hardness HV5	> 215
	Tensile strength (Rm)	> 750 MPa
	0.2% Elongation limit (Rp 0.2%)	> 650 MPa
	Elongation at break	> 2 %

Cast-on gold alloy base for bar abutment		
Properties		
Chemical structure (in %)	Au	60
	Pt	19
	Pd	20
	Ir	1
Physical properties	Density	17.5 g/cm³
	Color	white
	Liquidus	1490 °C
	Solidus	1400 °C
	Coefficient of thermal expansion (25 – 500°C)	12.5 µm/m· °C
	Coefficient of thermal expansion (25 – 600°C)	12.6 µm/m· °C
Mechanical properties	E-Modul	136 GPa
		hardened 700 °C/30 min.
	Hardness HV5	210
	0.2 % Elongation limit	450 – 570 MPa
	Elongation at break	min. 10 %
	Tensile strength MPa	530 – 650

Solderable gold alloy base for bar abutment		
Properties		
Chemical structure (in %)	Au	68.60
	Pt	2.45
	Ag	11.85
	Pd	3.95
	Cu	10.60
	Zn	2.50
	Ir	0.05
	Rh	-
	Ru	-
Physical properties	Color	yellow
	Melting range	880 – 940 °C
Mechanical properties	Hardness	
	annealed HV5	175
	hardened HV5	275
	self hardened HV5	240

J5302.0010	Holding key for insertion post	47		Osteotome SCREW-LINE
	Holding sleeve for screw implants		J5420.3300	Ø 3.3 mm, straight concave
J5302.3300	Ø 3.3 mm	47	J5420.3310	Ø 3.3 mm, angled concave
J5302.3800	Ø 3.8 mm	47	J5420.3800	Ø 3.8 mm, straight concave
J5302.4300	Ø 4.3 mm	47	J5420.3810	Ø 3.8 mm, angled concave
J5302.5000	Ø 5.0 mm	47	J5420.4300	Ø 4.3 mm, straight concave
	Guide System driver		J5420.4310	Ø 4.3 mm, angled concave
J5303.4300	Ø 3.3/3.8/4.3 mm, manual/wrench	41	J5420.5000	Ø 5.0 mm, straight concave
J5304.4300	Ø 3.3/3.8/4.3 mm, with ISO shaft	41	J5420.5010	Ø 5.0 mm, angled concave
	Screwdriver, hex		M1000.0050	ALTApin magazine, 1 unit
J5317.0501	short, manual/wrench	47, 80	M1000.0100	ALTApin magazine, 3 units
J5317.0502	long, manual/wrench	47, 81		
J5317.0503	long, ISO shaft	48, 81	M5100.0010	ALTApin applicator, straight
J5317.0504	short, ISO shaft	48, 81		
J5317.0510	extra short, manual/wrench	47, 80	M5100.0030	ALTApin applicator, angled 90°
J5317.0511	Manual screwdriver, hex	48, 81	M5100.0050	ALTApin pricker
J5320.1030	Torque wrench	78	M5100.0070	ALTApin membrane fixator
	Tap adapter		M5100.0100	ALTApin surgery mallet
J5322.0010	short	44		
J5322.0011	long	44	M5200.0010	ALTApin applicator, straight, work element
J5330.8500	Prosthetic tray	80		
J5330.8600	Prosthetic set	80	M5200.0055	ALTApin pricker, insert
J5330.8700	Prosthetic tray universal	80	M5500.0050	ALTApin single patient drill, ISO shaft
J5417.2800	Pre-Osteotome SCREW-LINE 1.7 – 2.8 mm, straight convex	49, 50	M5600.0110	ALTApin set
	Osteotome SCREW-LINE		M5600.0210	ALTApin tray
	Osteotomy set CAMLOG®/			53
	CONELOG® SCREW-LINE,			
J5418.0020	straight convex	49		
J5418.0030	angled convex	50		
	Osteotome SCREW-LINE			
J5418.3300	Ø 3.3 mm, straight convex	49		
J5418.3310	Ø 3.3 mm, angled convex	50		
J5418.3800	Ø 3.8 mm, straight convex	49		
J5418.3810	Ø 3.8 mm, angled convex	50		
J5418.4300	Ø 4.3 mm, straight convex	49		
J5418.4310	Ø 4.3 mm, angled convex	50		

Further documentation

Further information on the CONELOG® Products can be found in the following documents:

- CONELOG® Product catalog
- CONELOG® Working instructions
- CONELOG® Instruction for use
- Preparation instructions
- Camlog literature overview
- Camlog and science

The documents are available from the local Camlog representative.
